

1. Summarising Notes

Prompt

Summarise the following notes into concise study notes using bullet points. Highlight the key concepts, definitions, and important facts. Keep the summary under 200 words.

Notes:

Photosynthesis is the process by which green plants use sunlight, water, and carbon dioxide to produce glucose and oxygen. It occurs mainly in the chloroplasts of plant cells. Chlorophyll absorbs light energy, which is converted into chemical energy. The process has two stages: the light-dependent reactions and the Calvin cycle.

Full AI Response

Photosynthesis – Summary Notes

- Photosynthesis is the process plants use to make food.
- Inputs: sunlight, water, and carbon dioxide.
- Outputs: glucose (food) and oxygen.
- Takes place mainly in chloroplasts.
- Chlorophyll absorbs sunlight energy.
- Light energy is converted into chemical energy.
- Two main stages:

- **Light-dependent reactions:** capture sunlight energy.
- **Calvin cycle:** uses captured energy to produce glucose.
- Photosynthesis is essential for plant growth and oxygen production.

Why the Prompt Worked

The prompt clearly specified the format (bullet points), the focus areas (key concepts and definitions), and the desired length. This helped the AI produce a concise and organized summary.

2. Generating a Study Plan

Prompt

Create a four-week study plan for a student preparing for a Biology exam. The student can study for 2 hours per day, 5 days per week. Include weekly goals and daily tasks.

Full AI Response

Week 1: Cell Biology

- Day 1: Cell structure and functions
- Day 2: Cell organelles
- Day 3: Cell transport
- Day 4: Practice questions

- Day 5: Review and quiz

Week 2: Genetics

- Day 1: DNA structure
- Day 2: Genes and chromosomes
- Day 3: Inheritance patterns
- Day 4: Practice questions
- Day 5: Review and quiz

Week 3: Human Body Systems

- Day 1: Digestive system
- Day 2: Respiratory system
- Day 3: Circulatory system
- Day 4: Practice questions
- Day 5: Review and quiz

Week 4: Revision

- Day 1: Cell Biology review
- Day 2: Genetics review
- Day 3: Body systems review
- Day 4: Full practice exam
- Day 5: Final revision

Why the Prompt Worked

The prompt provided a clear timeframe, subject, and study availability. This allowed the AI to create a realistic and structured study schedule.

3. Creating Interview Questions

Prompt

Generate 10 interview questions for a candidate applying for a Junior Software Developer position. Include a mix of technical and behavioural questions.

Full AI Response

1. Can you tell us about yourself?
2. Why are you interested in software development?
3. What programming languages are you most comfortable using?
4. Explain the difference between a list and an array.
5. Describe a project you have worked on recently.
6. How do you approach debugging code?
7. Tell us about a time you worked in a team.
8. How do you handle tight deadlines?
9. What steps do you take to learn new technologies?
10. Why do you think you are a good fit for this role?

Why the Prompt Worked

The prompt specified the job role and requested both technical and behavioural questions. This ensured a balanced set of interview questions relevant to the position.

4. Writing a Resume Summary

Prompt

Write a professional resume summary for a recent Computer Science graduate seeking an entry-level software developer role. Highlight programming skills, teamwork, and problem-solving abilities.

Full AI Response

Motivated Computer Science graduate with a strong foundation in software development, programming, and problem-solving. Proficient in Java, Python, and web technologies, with experience completing academic and personal projects. Strong team player with excellent communication skills and a passion for learning new technologies. Eager to contribute technical knowledge and creativity to an entry-level software developer position.

Why the Prompt Worked

The prompt identified the candidate's background, target role, and key strengths to emphasize. This enabled the AI to produce a tailored and professional summary.

5. Creating a Lesson Plan

Prompt

Create a 45-minute lesson plan for teaching the basics of fractions to Grade 5 students. Include learning objectives, activities, and an assessment.

Full AI Response

Topic: Introduction to Fractions

Duration: 45 Minutes

Learning Objectives

- Understand what fractions represent.
- Identify numerator and denominator.
- Compare simple fractions.

Lesson Activities

Introduction (10 minutes)

- Discuss examples of fractions using pizza slices and chocolate bars.

Guided Practice (15 minutes)

- Explain numerator and denominator.
- Solve examples together.

Group Activity (15 minutes)

- Students use fraction cards to match fractions with visual representations.

Assessment (5 minutes)

- Complete a short worksheet with five fraction questions.

Why the Prompt Worked

The prompt specified the topic, grade level, lesson duration, and required sections. This gave the AI enough context to create a complete and practical lesson plan.
